GLEN DIMPLEX DEUTSCHLAND

GLEN DIMPLEX DEUTSCHLAND

At home in a Worldwide Enterprise

Size isn't everything. Yet, it does have its advantages. As an independent subsidiary of the globally operating GLEN DIMPLEX GROUP, a large share of the Group's heating and cooling expertise is concentrated in GLEN DIMPLEX DEUTSCHLAND, which is located in Kulmbach in Franconia. Furthermore, a separate division is dedicated to the area of consumer products with brands known around Europe.

Due to the synergies resulting from the good teamwork within the Group, there is access to a network of contacts, experience, and references and highly innovative research. Together with its own development teams, highly motivated employees, and modern, spacious production sites, where the production follows the latest production-related findings, GLEN DIMPLEX DEUTSCHLAND is taking a market leading position in many areas of heating, air-treatment and cooling technology.

GLEN DIMPLEX GROUP

GLEN DIMPLEX was founded in Ireland in 1973 and today, is the leading manufacturer of electric heaters. Furthermore, the global Group holds significant market shares in the field of innovative household appliances. 8500 employees earn 1.5 billion euros. The Group has been in private hands since its founding and finances its constant growth with its own resources. Fundamental to the success are the business policies, which are based on continuous investments, strategic market development, and innovations that are in line with the market.

The Group follows a strategy that is characterised by internationalism and entrepreneurial trade and avoids unnecessary bureaucracy. Part of the corporate philosophy is the establishment of strong, dynamic, and efficient business units, which operate independently to a great extent and which are subject to the strictest of guidelines with regard to efficiency, quality, and ethics. Here, the needs of the customers are in the foreground. The above-average growth of the Group is based on the work and the commitment of all employees, the high acceptance on the part of the customers, as well as strong support from suppliers. Regarding marketing of the product range, the Group follows a successful single brand strategy. The brands found in the portfolio are positioned individually in order to be able to do justice to the different customer expectations at all times. Each brand has its own success story and takes a market leading position in the respective product segment.

GLEN DIMPLEX
DEUTSCHLAND

DIMPLEX Division

The former Kulmbach climate control equipment plant had made a good name for itself with thermal storage heaters and heat pumps right from its founding. In the meantime, a trendsetting, complete range of products for home heating and system technology has been developed under the DIMPLEX brand.

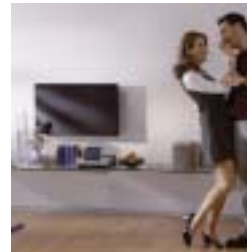

The provider of a full range of products: Due to the extensive range of products from thermal storage heaters, direct heaters, hot water heaters and climate control equipment and right up to heat pumps and ventilation equipment, DIMPLEX can provide everything as a sole source. These products can no longer be dismissed from the range of products in the electrician and plumbing business. In these fields, we have a market leading position.

As a successful company, we will take the opportunities that are presented to us as a member of the global GLEN DIMPLEX GROUP and be active in further expanding the areas of energy-saving heating systems and the use of regenerative heat sources.

Division RIEDEL Cooling Technology

In the RIEDEL Division, we can look back at over 35 years of experience in industrial and commercial cooling technology. As a company for industrial cooling, RIEDEL operates within the worldwide GLEN DIMPLEX group of companies. As a result, it can fall back on a network of contacts, experience and reference systems, highly innovative research and last but not least, inexpensive methods of production with the highest demands on quality. Consequently, RIEDEL is the leading supplier of industrial cooling.

The cooling devices, water cooling sets and cooling modules are used worldwide in industry, medical technology, and in commercial cooling. Thanks to the modular design of the cooling components and the flexible, ultra-modern production, which covers more than 20,000 m² of production space and makes it possible to manufacture serial products economically and always with the same certified quality, RIEDEL is a supplier for small and large numbers of products for a great variety of requirements, and it delivers ex warehouse. For OEM partners, RIEDEL manufactures serial units according to a functional specification under the name of the OEM.

Comfortable climate all
around the swimming pool

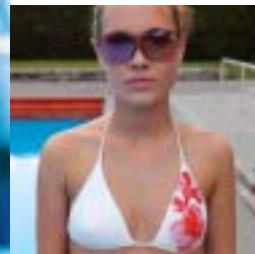

GLEN DIMPLEX
DEUTSCHLAND

KVS Climate Control Division

For more than 30 years, the name KVS has stood for innovation, reliability, longevity, and outstanding service in climate control for swimming pools. Since this time, thousands of climate control components – from heat pumps for heating the swimming pool water and air dehumidification equipment right up to complex ventilation systems – ensure an excellent, comfortable climate in private and municipal swimming pools in all of Europe. Thanks to putting this traditional company into GLEN DIMPLEX DEUTSCHLAND with the administration and ultra-modern production site in Kulmbach in Franconia, KVS now has open access to all possibilities for research, project management, and rational production that is 'Made in Germany'. As was the case in the past, longevity, easy operation, outstanding design, and service without compromise are in the forefront of all thought. The products for an all-round comfortable climate in the swimming pool are being constantly expanded with sensible products, many of which come from the Group's range of products. With more than 70 customer service partners in Germany, KVS is a reliable contact partner for swimming pool builders and installers.

Know-how in heating and air-conditioning

ewt Division

ewt is the trademark of GLEN DIMPLEX DEUTSCHLAND for successful consumer products. It is market leader for electric heaters in Germany, and the ewt Division is one of the leading international suppliers of innovative home heaters. Its own development departments and design teams in Germany and Europe get the market going with new ideas. Thanks to the worldwide expertise of the GLEN DIMPLEX GROUP in research and development, each year up to 150 products in the areas of floor care, heating, air-conditioning, grilling, and small kitchen appliances are newly designed and developed and made ready for series production. Consequently, ewt is an indispensable partner for the German industry. Due to the worldwide purchasing and production possibilities of the Group, it is possible for ewt to respond quickly and effectively to market trends, like no other. The Group's own worldwide local subsidiaries ensure outstanding quality. It is their job to closely monitor the purchasing of raw materials, to have price-conscious production, right up to having regular quality audits. With powerful brands, the ewt Division is endeavouring to further expand its market leadership in its market segments and to firmly establish it through extensive services.

The EIO Brand

EIO floor vacuum cleaners can look back at a long period of tradition. The origin of today's most modern vacuum cleaner plant in Europe goes back to the year 1914. As a result of the integration into the GLEN DIMPLEX GROUP, the company in Sonneberg in Thuringia developed quickly into an ultra-modern production site for modern, high-performance floor vacuum cleaners. Predominant features of the company's management are the readiness to invest in new development and the consistent thinking in terms of quality and service. Its own design and technical teams develop in Germany for the customer's tastes in Europe, and through mature series production, EIO is able to meet customer requests quickly in certified quality.

Innovations that Move the Market.

We are complying with the trend among our retail customers of promoting their own brands and the increasing awareness of the end consumers for individual household products that are tailored to their own tastes with our variable chassis concept for the shape and design.

morphy richards® ENGINEERING MADE IN EUROPE

FÜR DIE MODERNE KÜCHE

Design and functionality based on tradition

Founded in 1935 by Donald Morphy and Charles Richards, morphy richards became a pioneer of industrial production of electric household appliances in only a few years. After being bought in 1985 by GLEN DIMPLEX, the worldwide market leader of electric heaters, morphy richards became number 1 in kitchen appliances in only 10 years. Through strategic investments, worldwide brand knowledge, and concentration on true innovations, morphy richards is the most-sold manufacturer in the UK in many product segments for the modern kitchen. The attractiveness of the products has increased through ongoing additions. In 2004, GLEN DIMPLEX DEUTSCHLAND took over sales for the small kitchen appliances in Germany under the ewt Division. This step has made the morphy richards brand present in more than 30 markets in all of Europe.

The brand for innovative electric heat

For more than 40 years, customers have associated the brand AKO with reliability, functionality, and quality. As the market leader for electric auxiliary heaters such as thermal wave heaters, convection heaters, quartz radiators, fan heaters, and hotplates, AKO operates as a powerful wholesale brand in the DIMPLEX division. It is not unfounded that almost every second infrared radiator bears the brand name AKO. Thanks to the innovative power of GLEN DIMPLEX DEUTSCHLAND in electric heaters and the synergies within the global GLEN DIMPLEX GROUP, new products are developed regularly and successfully offered to the retail market.

NOBØ ELECTRO AS ENGINEERING MADE IN EUROPE

Heat in its most beautiful form

The NOBØ ELECTRO AS company, close to Trondheim in Norway and a subsidiary of the GLEN DIMPLEX GROUP, is the worldwide specialist for highly innovative thermal wave heaters made of exquisite glass. As a heat dispensing designer object, they are the non plus ultra of your living room, bathroom, office, or of the relaxation room of your sauna. Sapphire glass thermal wave heaters are very convincing due to their simple, exquisite design with a wall thickness of only 9 mm. The heating element is embedded directly into the glass. This transparent design opens up many creative heating ideas and also provides an elegant heating solution where there isn't much space.

The special feature is the creative combination of gentle heat radiation and a decorative mirror – ideal in any modern bathroom or bedroom.

Innovations – our success formula

GLEN DIMPLEX GERMANY's history of innovations goes back more than 40 years and is found in all divisions, from air-treatment and cooling technology to consumer products.

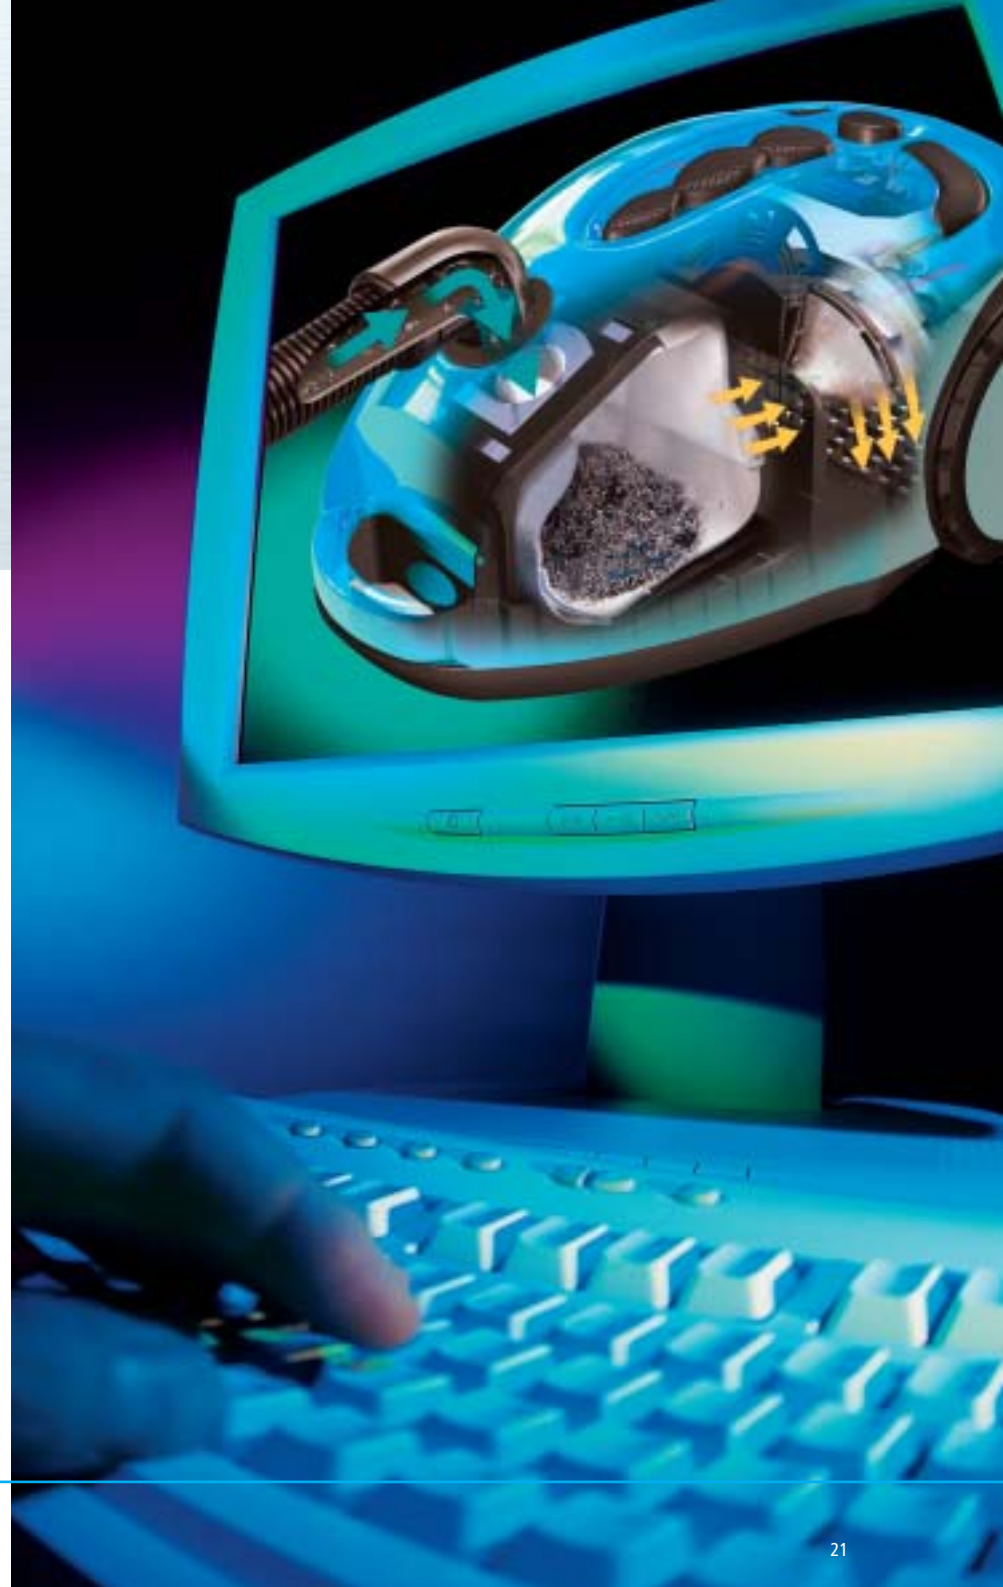

As a result, the first electric thermal storage heaters with trendsetting insulating technology with a casing that is only 25 cm deep came from our company. Furthermore, we were leaders in the development of heat pump technology. We developed heat pumps that generated up to 80% of their heating energy from the ambient air, the ground, or the ground water and presented complete, integrated, building services solutions with our reversible heat pumps, which optimally combined heating and cooling in one system.

In the consumer products division, our electric grilling kitchens set standards for functionality and design.

With the EIO floor vacuum cleaners, we have fulfilled the desires of many of our customers to create their own unmistakable product with regard to shape and design, with the most modern imprinting technology available.

We produce all of our developments with the most modern production techniques in our plants in Kulmbach, Sonneberg, and in production sites of the GLEN DIMPLEX GROUP.

We are proud that we can contribute to the success of our customers. Their needs are the orientation point for us and the challenge at the same time. The people at GLEN DIMPLEX DEUTSCHLAND fulfil them through the development of innovative technologies and through new products and services that are in line with the market, which meet the high demands of 'Made in Germany'.

Here, quality is tailor made

The international market insists on rapid adaptation to new trends and new technologies. This requires extreme flexibility in production, assembly, and service. We at GLEN DIMPLEX DEUTSCHLAND tackle this challenge with standardised, flexible modular systems that we build according to need. In the process, we only use brand name components that have been tried and proven a million times over. As the well-known manufacturer in the world market, we use highly efficient technologies and the most modern production methods. This includes, for example, optimised line production, automated precision welding and bending systems, powder coating, computer-aided assembly stations and testing facilities for operational simulation under authentic application conditions. Our universal high quality is fulfilled through the certification according to DIN EN 9001 and 1401.

Environmental management and service

High aims and motivated people stand behind outstanding performance.

With us, employees take a central role. Behind this is our firm conviction that our highly qualified personnel with their development and management potential are our greatest asset. However, this potential must be specifically promoted at all levels in order to fully develop. We do this continually and consistently.

Environmental Management Made by GLEN DIMPLEX DEUTSCHLAND

We regard acting in an ecological way to be a self-evident part of our corporate responsibility.

Ecological criteria mark our development and the production processes right from the start.

You can proceed on the assumption that products, equipment, and components meet the demands placed on environmental friendliness in the same way that they meet the demands placed on efficiency.

Here, we regard the implementation of legal requirements, which must be complied with in Germany, as a business investment in the future.

In everything that we do, we are aware that we only have one world and we are responsible for it.

Service from Professionals for Professionals

Thanks to our production sites in Kulmbach in Franconia and our floor vacuum cleaner plant in Sonneberg in Thuringia, we – like no other – are in a position to offer extensive logistics, prompt spare parts service, and fair guarantee handling from a sole source, in addition to competent advice.
